RAVINA HAREKAR

SENIOR JAVA DEVELOPER | APIGEE DEVELOPER

Mumbai, India | +91 9309265742 | harekarravina87@gmail.com

PROFESSIONAL SUMMARY

Results-driven Java & Apigee Developer with 7 years of IT experience, specializing in Java, Spring Boot, Microservices, REST APIs, and Apigee X for the past 3.8 years. Expert in designing, building, and securing enterprise backend systems across the complete API lifecycle. Key expertise includes **OAuth 2.0, JWT, mTLS, GCP, Docker, microservices architecture, and API integration**. Having transitioned from full-stack Angular development to specialized backend engineering, applies robust design patterns and SOLID principles in event-driven environments. Combines full-stack perspective with backend expertise to architect seamless end-to-end integration solutions.

CORE SKILLS

Apigee: Apigee X, API Proxy Development, Shared Flows, Target Servers, KVM, Java Callout, JavaScript/JSONToXML Policies, Spike Arrest, Threat Protection

Backend: Java, Spring Boot, Spring MVC, Microservices, Event-Driven Architecture

Security: OAuth 2.0, JWT, Encryption

API Design: RESTful API Design, OpenAPI, Postman

Cloud & DevOps: GCP, Docker, CI/CD Pipelines, Git, Bitbucket, Maven

Testing & Data: JUnit, Mockito, MySQL, Oracle, PostgreSQL, MS SQL Server

Frontend (secondary): Angular 11+, TypeScript, JavaScript, HTML5, CSS, Bootstrap

PROFESSIONAL EXPERIENCE

Senior Java Developer/Apigee Developer — Eka Academy (Client: Mahindra Finance) *Dec 2022 – July2026*
Mumbai, India

- Architected microservices using Spring Boot and Apigee Flow components, streamlining execution and improving system efficiency across a BFSI lending platform.
- Strengthened API security by implementing OAuth 2.0 and JWT-based authentication alongside IP whitelisting, reducing exposure to unauthorized access.
- Configured TLS keystores and mutual SSL to secure client-to-backend communication for financial transaction APIs.
- Implemented real-time API monitoring and analytics using Apigee and GCP to track traffic patterns and performance bottlenecks.
- Participated in disaster recovery (DR) plans to minimize downtime and strengthen operational resilience.
- Automated deployment workflows by building CI/CD pipelines with Docker and GCP, improving release consistency.
- Spearheaded the transformation of legacy ESB services into a scalable microservices architecture on GCP Cloud Run, utilizing GCP Pub/Sub to integrate event-driven design patterns.
- Developed decoupled, asynchronous workflows to optimize infrastructure efficiency and system elasticity. Designed secure Spring Boot web services featuring end-to-end encryption for seamless integration across enterprise downstream systems

Angular Developer — infoUD (Client: Neebal Technologies) *Oct 2019 –Dec 2022*
Mumbai, India

- Developed responsive web applications using Angular, HTML/CSS, and TypeScript for enterprise clients.
- Designed and built Rest APIs using Java and Spring Boot.
- Integrated RESTful API endpoints into front-end architectures, enabling seamless data flow between services.
- Established unit testing frameworks using JUnit and Mockito, improving code quality and exception-handling coverage.

KEY PROJECTS

Dynamic Personal Loan App — E-NACH / e-Mandate APIs

- Developed and enhanced **E-NACH and e-Mandate REST APIs** using **Java, Spring Boot** to support digital mandate registration and loan repayment processes.

- Developed a custom **AIR Calculator API** to calculate **repayment schedules, AIR, and IRR** based on loan amount, tenure, interest, and repayment parameters.
- Integrated APIs with **third-party banking/payment services** using secure authentication mechanisms such as **OAuth 2.0, JWT, and mTLS**.
- Designed and exposed APIs through **Apigee X**, implementing policies for authentication, authorization, traffic management, routing, and API security.
- Implemented **request/response validation, exception handling, logging, and monitoring** to improve API reliability and troubleshooting.

SequelString — OCR Document Extraction Module

- Built an Angular 11 and Spring Boot module to extract structured data from PDF documents such as electricity bills and PAN cards.
- Developed a responsive UI enabling users to validate and edit extracted data before submission.

My Forecast Lab — Sales Forecasting Web Tool

- Built a centralized Angular 11 forecasting system with Handsontable for spreadsheet-style data entry and analysis.
- Implemented hierarchy-based business logic for sales forecast calculations and automated reporting.

EDUCATION

Bachelor of Engineering, Computer Science — RMCET (University of Mumbai), Ratnagiri | 2016 – 2019
Diploma in Computer Engineering — Sahyadri Polytechnic, Sawarde, Ratnagiri | 2014 – 2016

CERTIFICATIONS

- API Security on Google Cloud's Apigee Platform – Coursera (Sep 2026)
- API Design and Fundamentals – Coursera (Sep 2026)
- API Development on Google Cloud's Apigee Platform – Coursera (Sep 2026)

LANGUAGES

English, Hindi, Marathi
